

# Timothy Marquart

Vice President of Technology, ExploreGod

Timothy Marquart is a technology and analytics leader dedicated to building the scalable digital infrastructure required for global Kingdom impact. As Vice President of Technology, Tim oversees engineering, platform delivery, and data strategy, ensuring that GMO's technological "science" remains a powerful vessel for the "art" of human connection. Tim's career is marked by a track record of enterprise-scale transformation.

Prior to joining the ministry, he led advanced analytics for Verizon's Global Services division, managing teams that informed billions of dollars in business decisions. He also held engineering leadership roles at Imperial Oil/ExxonMobil. Tim holds dual master's degrees from the Massachusetts Institute of Technology (MIT)—an MBA from Sloan and an SM in Mechanical Engineering.

A long-time friend of the ministry, Tim served on GMO's Technology Advisory Board for two years before joining the executive team. He is particularly passionate about the redemptive potential of technology, viewing GMO's proprietary PATH platform as a historic tool for fulfilling the Great Commission in a digital age.

Tim's own faith journey began in college when he encountered the evidence for the Gospel through The Case for Christ. Today, he is motivated by the "5-Star Strategy" to help millions of seekers move from initial curiosity to flourishing faith. Tim resides in Texas with his wife of 15 years and their three children.
